

A woman with long brown hair, wearing a bright orange, textured, long-sleeved dress and black high-heeled shoes, is sitting on a dark brown leather tufted sofa. She is smiling at the camera. The sofa has several decorative pillows, including one with a white lace pattern and gold sequins. In the background, there is a window with patterned curtains. A black text box is overlaid on the top left of the image.

# ADVANCED EYE CARE

*Dr. Lisa K. Feulner*

Celebrating 10 Years  
of Dedicated, Personalized  
& Quality Health Care in  
Harford County!

*Dr. Feulner is pictured with several members of the Advanced Eye Care team at the Harford Chamber Business After Hours event hosted in March 2014. (L-R) Kathy Clark, Leslie Lewis, Carol Gibson, Dr. Sally Mina, Dr. EffieMarie McGowan, Dr. Lisa K. Feulner, Monica Worrell and Denise Miller.*

Churchville resident, Lisa K. Feulner is a board-certified ophthalmologist with a thriving practice, Advanced Eye Care & Aesthetics in Bel Air. Her all-woman team consists of herself, two optometrists, Dr. Marie McGowan and Dr. Sally Mina; an aesthetics provider, Jackie Montgomery RN, and over a dozen technical, optical and administrative personnel. Like Dr. Feulner herself, the Advanced Eye Care team is dedicated to providing patients with the highest level of comprehensive eye care in a professional, compassionate, and caring manner. "At Advanced Eye Care, we know that eye health is an indicator to overall health. Our team approach allows us to provide comprehensive and personalized eye care to our patients, both young and old," stated Dr. Feulner.

As a young girl, Lisa was drawn to medicine. As early as 6th grade she was fascinated by the nervous system and the brain. After 4 years of college, and a year at Temple University doing research, she applied, and was accepted into the Medical Scientists Training Program. This prestigious position sponsored by the National Institute of Health provided her a full scholarship for medical and graduate school. Dr. Feulner explained, "while my Ph.D. is in molecular neuroscience and my thesis was on Alzheimer's disease, when I finished medical school, I realized that I loved surgery, but did not want to become a neurosurgeon. It was then that I realized that Ophthalmology was the perfect fit for me."

"Almost everything that happens to the body can be detected through the eye. It encompasses everything I learned about general medicine, and internal medicine, while incorporating my love of surgery. I work with cutting edge technology and still see patients on a day-to-day basis. I enjoy providing exceptional quality of care to people of all ages." She continued, "Did you know that through the eyes, I can detect diabetes, high blood pressure, carotid artery disease, irregular heartbeat, and certain types of cancers as well as many systemic diseases? Multiple sclerosis for example presents visually with symptoms."

Coming from a family of artists... her father was a brilliant architect and her brother, an accomplished artist and graphic designer, Dr. Feulner thought she had missed out on the family talent. It wasn't until she incorporated a variety of aesthetic services into her practice, that she found her artistic calling. "The cosmetic part of the practice is very artistic. Unlike many things in medicine you have to have the vision to create something... to envision the end results before you begin. It's a very creative process, that I really enjoy," she said with a smile.

When Dr. Feulner isn't working she spends time with her husband Greg, and their two children Leah and Aidan. She is passionately involved in the community, and supports many organizations and charities. However, The Boys and Girls Club of Harford County has a special place in her heart. She shared, "I have had the pleasure to meet some incredible kids. Children who without the added support system found within the structure of the club might not be able to reach their full potential. Working with the Boys and Girls Club of Harford County is a chance to change the world, one child at a time. Building great kids, builds great futures."

## Dr. Feulner Offers the Latest Services in Non-Surgical Cosmetic Procedures

### BOTOX Cosmetic

BOTOX Cosmetic is a prescription medicine that is injected into muscles and used to improve the look of moderate to severe frown lines between the eyebrows. Results can be seen in as little as 24-48 hours and will last for up to 4 months. "Botox is probably our most popular treatment," said Dr. Feulner. "It is easy, relatively affordable, not painful, and there are no tell-tale signs afterwards."

### Juvederm® & Voluma®

Juvederm® is a smooth consistency gel made of hyaluronic acid – a naturally occurring substance in your skin that helps to add volume and hydration. The gel is injected under the skin to instantly restore your skin's volume and smooth away facial wrinkles and folds, like your "smile lines". Voluma, a new product, offers lift that's instant and long lasting. It adds volume lost to aging in the cheek area, while helping to enhance contour and create a more youthful profile lasting up to 2 years with optimal treatment

### Radiesse

Healthy young skin contains collagen that gives it volume, flexibility and strength. As we age, our own natural collagen breaks down, diminishing facial volume. With Radiesse® wrinkle filler, you welcome back your own natural collagen to smooth out the signs of aging. That's because Radiesse® wrinkle filler's unique formulation stimulates the production of new collagen – which results in increased volume for natural looking wrinkle correction that may last a year or more in many patients.

### Obagi®

Obagi skin care products are clinically-proven skin health products and systems. Obagi uses prescription-strength formulations, therefore it is only available through a medical office. It treats a variety of adult skin conditions including premature aging, photodamage, hyperpigmentation, acne, sun damage, rosacea and soft tissue deficits, such as fine lines and wrinkles.

### ReFirme Skin Tightening & Wrinkle Reduction

ReFirme is a complete anti-aging solution for targeting those telltale signs of aging, including, jowl and neck laxity, sagginess under the eyes, saggy brow lines, and nasolabial folds. Unlike conventional laser skin tightening treatments that are time and treatment intensive, and often too painful for many patients; ReFirme offers virtually painless and fast treatment for sagging and wrinkled skin.

### Latisse®

Latisse is a prescription treatment for hypotrichosis (inadequate or not enough lashes) to grow eyelashes longer, fuller and darker.

## Dr. Lisa Feulner's Most Popular Surgical Cosmetic Procedure

### Upper & Lower Lid Blepharoplasty

Blepharoplasty, also known as an eye lift, is a procedure to correct the sagging or drooping of the eyelids and the removal of excess fat, skin and muscle. As we age, it is common to see a difference in the eye area – more laxity, bags below and above the eye; sometimes so much that the upper lid seems to disappear underneath the extra fatty area under the brow bone. Even with good skincare and eye care, wrinkles, puffiness and drooping eyelids will occur. Genetic factors and body chemistry can cause these aging effects in younger people. Blepharoplasty can give a more youthful appearance to an otherwise older, more tired looking, face.
